

calendar

A single user can have multiple calendars. These calendars might be hosted at different locations/services. E.g. a person has a 'personal' and a 'workgroup' calendar in 'I-MATH Zimbra' and an additional on 'Google Calendar'. Different applications (like Zimbra Webinterface, Thunderbird, Apple Calendar, mobile device ...) has to be configured to access all the different calendars.

Calendars might be shared between a group of users and read/write permissions might be delegated.

I-MATH: Zimbra

- Webinterface: <https://mail.math.uzh.ch> > Calendar
 - Multiple calendars are possible.
 - Sharing Calendar with other persons (I-MATH mail account).
 - Remote Calendars can be configured.
- Thunderbird / Lightning
 - [Use Zimbra Calendar in Thunderbird](#)

Google

- Appointments, send from a Google calendar are recognized in I-MATH Zimbra.
- Zimbra calendar appointments are recognized by Google calendar.
- Remote Google calendar can be configured in the Zimbra Webinterface (but won't be exported to external apps - the external app needs to be configured to access Google calendar directly).
- Thunderbird can be configured to read/write to a Google calendar.
 - Thunderbird can save incoming appointments to a Google calendar (with the restriction that the Google calendar is the only calendar in Thunderbird)

Thunderbird

Join Zimbra Calendar

- [Use Zimbra Calendar in Thunderbird](#)

Join Google Calendar

1. Thunderbird:
 - Tools > Add-ons > Provider for Google Calendar (More) > Home page (follow the link) > Add to Thunderbird > Restart Thunderbird.
 - File > New > Calendar > On the network > Google Calendar > Next > {your Gmail email address} > Next > {Gmail account details}, allow the Provider for Google Calendar add-on to manage your calendars > Choose the calendars you want > Next > Finish.
2. Activate 'calendar.google.enableEmailInvitations'
 - Thunderbird: Edit > Preferences > Advanced > Config Editor... > double click on 'calendar.google.enableEmailInvitations'
 - If you want to get appointments directly into the google calendar when accepting, you have to **delete your local calendar** in Thunderbird (has been created automatically).

Mac OS X

- https://wiki.zimbra.com/wiki/Accessing_Zimbra_Collaboration_Server_with_iCal_and_Calendar

Android

- [davx5](#) to connect to any iCalDav capable calendar (like I-MATH Zimbra) - Cost: 6 CHF
