

Homepage

- Technical webmaster: webmaster@math.uzh.ch
- Content webmaster by page:
 - Landing Page: Managing Director
 - School: Managing Director
 - Institute: Managing Director
 - Academic programme: Didactic Coordinator, Lecturer, Tutor
 - For students: Didactic Coordinator
 - For PhD students: ZGSM Administration
 - Listed members are maintained by HR. Role assignment automatically show/remove person on/from specific pages.

Lecture / Seminare

- Initial setup by didactic coordinator.
- Typically no self created pages - please use the institute web interface to show content.
 - Special needs can be discussed with support@math.uzh.ch
- Content management during semester: Lecturer, Tutor.
- Student lists are updated daily from UZH/SAP module subscription.
- Exercise / weekly correction:
 - Traditional submitting correction (exchange paper homework between student & corrector)
 - Traditional + graded points via 'I-MATH My'
 - Electronic upload (PDF or phone picture) + grading via 'I-MATH My'
- Streaming / Recording:
 - Y27 rooms are equipped with [SeminarLive](#) - good blackboard video quality, ceiling microphones.
 - Non-Y27 room: check [SeminarLive](#) > Rooms for !SeminarLive equipped rooms.
 - Non-!SeminarLive room: screen sharing (no blackboard) is supported as usual like Zoom or MS-Teams. Wireless Microphone can be rent at IT Support.

Conference

- Setup / maintaining by professorship administration.
- Design: Standard I-MATH integration (recommended, less effort) or individual design.
- Participant registration.
- Announcement on mailinglist and I-MATH homepage caroussell.

- The I-MATH page lists conferences which are organized by an I-MATH professorship / lecturer.

Announcement

Caroussell

Contact: Managing Director.

- Conferences (pictures for the caroussell has to be given).
- Prizes / Honors
- Institutes Events

Email Reminder

- Conference, Colloquia, Research seminar, Institute event: automatically. 'Days before event' can be configured per event and (if needed) per talk.
- Subscription:
 - Default:
 - Conference: academic member.
 - Colloquia, Research seminar: members of the working groups of the organizer.
 - Individual: Self Registration

Personal Homepage

All institute members are automatically listed (<http://www.math.uzh.ch/members>) on the institute's page (as long as they are employed), including a detailed **personal page** with subpages for Research, CV and Publications. The data shown are either automatically generated and (optional) manually extended by the user via 'Local Info' (see below), or loaded from a directory where the user can create HTML files directly.

Via 'MY'

1. Go to <https://www.math.uzh.ch> > MY > Login > Personal homepage
2. For every page (Main, Research, ...) a list of records can be created. Each record might contain text, links, pictures or PDFs for download. To style the output, use HTML.

HTML

- For this option, it is necessary to have knowledge in HTML, because the support group will not help you fixing HTML / CSS or problems of the sort. If you do not know HTML, use the offer above.
- Please contact <http://www.math.uzh.ch/support> and ask to setup the necessary 'public_html' directory and corresponding URL.
- In your home directory, a new directory called 'public_html' will appear. Please save all of your homepage files there.
- The entry page has to be called 'index.html' (the filename has to be lowercase).

* After creating new files: open a terminal (Applications > System Tools > MATE Terminal) and type `setwww` and press `enter`:

```
setwww
```

- The URLs are typically: <http://user.math.uzh.ch/<lastname>>

Design

To create a modern homepage that can be viewed from desktop devices and smartphones alike, please refer to the following links:

- [bootstrap](#) - A mobile first HTML/CSS/JQuery framework for your homepage made by twitter.
- [foundation](#) - Alternative framework to bootstrap.
- [w3schools](#) - A site offering tutorials and information for HTML, CSS, Bootstrap and Javascript.
- [List of cc0 image galleries](#) - Creative Commons 0 images can be used freely.

Password protection

- Create the file `.htaccess` in the access restricted directory, e.g.:
`~/public_html/private/.htaccess`.
- Content:

```
AuthName "private stuff login"
AuthType Basic
AuthUserFile /userpages/<surname>/.htaccessusers
require valid-user
```

- Create or modify your user database:

```
# Create .htaccessusers
$ htpasswd -c ~/public_html/.htaccessusers <username>

# If there is a .htaccessusers file and you would like to add or alter a user/password:
$ htpasswd ~/public_html/.htaccessusers <username>
```

- Do not forget to call `setwww` if you create new files.

HTML Math Symbols

Math Symbols can be typed as HTML codes in modern browsers:

https://www.w3schools.com/charsets/ref_utf_math.asp

Redirect

- <https://developer.mozilla.org/en-US/docs/Web/HTTP/Redirects>

```
<head>
  <meta http-equiv="refresh" content="0; URL=http://www.example.com/" />
</head>
```

Revision #3
