

iOS Screen Sharing

To share the screen of your ios device we present the following two solutions:

https://airserver.com	Recommended. Free 30 day trial, 11 EUR for a permanent license
QuickTime	Requires wired connection and Mac Notebook . Is easy to set up.
Reflector App	Works wireless but also requires a Mac Notebook .

Airserver

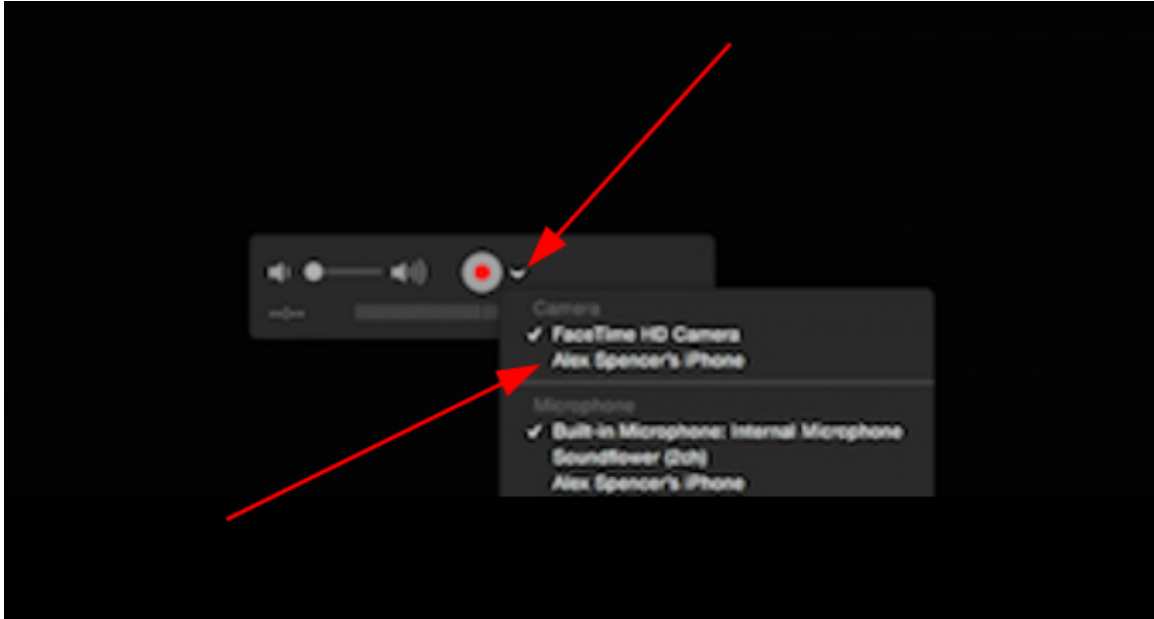

- Install [AirServer](#) (30 days for free, 11 EUR for a permanent educational license [buy](#)) and start it.
- On the ios device:
 - Swipe up from the bottom bezel to **open the Control Center**.
 - From the Control Center **click AirPlay. Choose the Mac** to which you wish to mirror from the list, then **enable Mirroring**.

QuickTime

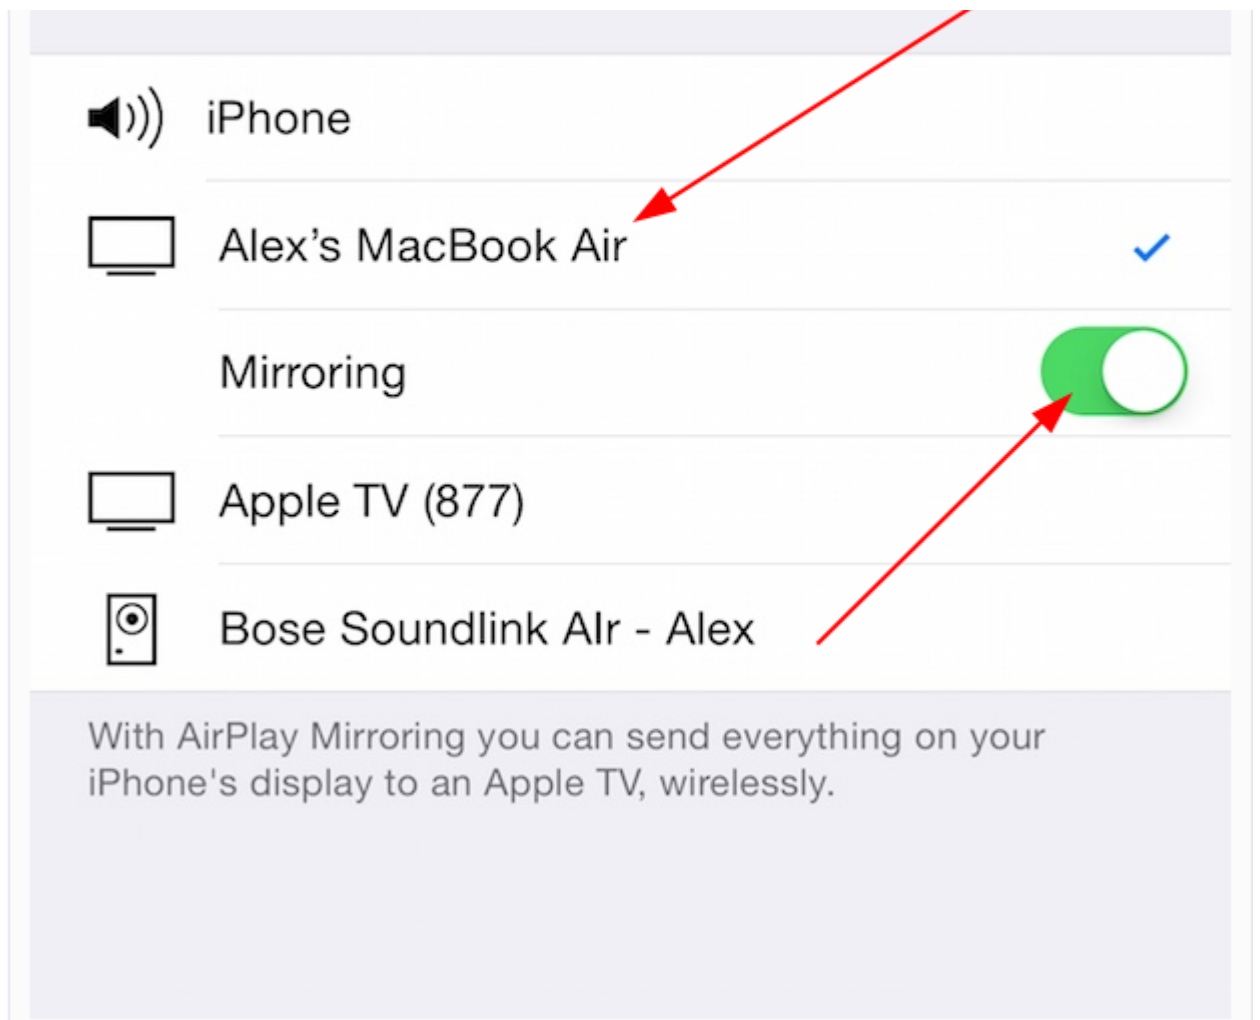

- Connect the iOS device to the Mac via a **Lightning-to-USB cable**.
 - Note: This connection may cause iTunes and/or Image Capture to automatically launch. Those programs may start trying to sync with the iDevice, and create lag. So be sure to **close those applications before moving forward**.
- Mac Notebook: **Launch QuickTime**. QuickTime will bring up a filepicker menu. The goal here isn't to play an existing file, so **click Done**.
- Mac Notebook: From the QuickTime menu bar, click **File**, then **New Movie Recording**.
- Mac Notebook: The default input device will be set to the iSight camera. To change it to the iOS device, **click the down arrow next to the record button**. Then **select the iOS device from the camera list**. The device's screen will instantly appear and any

actions taken on the device will be mirrored to the Mac's display.

Reflector App

- Requirements:
 - A **paid software** must be installed on the Mac. But Reflector does offer a **free seven-day trial**.
 - Both the Mac and iOS device have to be **connected to the same Wi-Fi network!!**
- Steps on the Mac Notebook:
 - Open the web browser and go to <https://www.air squirrels.com/reflector/try>.
 - Click **Download FREE for 7 days** bellow "Reflector 3 for Mac"
 - **open the downloaded file.**
 - **Drag Reflector to the Applications folder.**
 - **Launch Reflector.**
 - Click **Try Reflector.**
 - You won't see any windows or other application screens appear. Reflector will live in the dock until an iOS device is connected to it!
- On the ios device:
 - Swipe up from the bottom bezel to **open the Control Center.**
 - From the Control Center **click AirPlay. Choose the Mac** to which you wish to mirror from the list, then **enable Mirroring.**
