

mobileScanPdf

- A recent mobile with a medium camera should be enough to scan any document (single sheet or series of) and produce a PDF of it.
- The well known 'CamScanner' app had strong [security impacts](#), instead use [alternatives](#).
- We checked [Microsoft Lens](#) (no advertisement, no registration) and [Adobe scan](#) (registration incl. birthday).
- Both Apps can do batch scan to produce a single PDF out of a series of photos.

Transfer to drive.math.uzh.ch

- Setup [Wiki: drive.math.uzh.ch](#) (Nextcloud) on your mobile and your desktop / thinlinc session.
- Do a scan and create the PDF.
- Select the document and share it to Nextcloud (drive.math.uzh.ch)

Share the scan

On your computer (notebook, thinlinc, ...), either:

- Direct access: use/ upload the PDF to the final target.
- Create link: log in via webbrowser to <https://drive.math.uzh.ch> and [share](#) your document (e.g. via auto expire anonymous link).
