

OneDrive

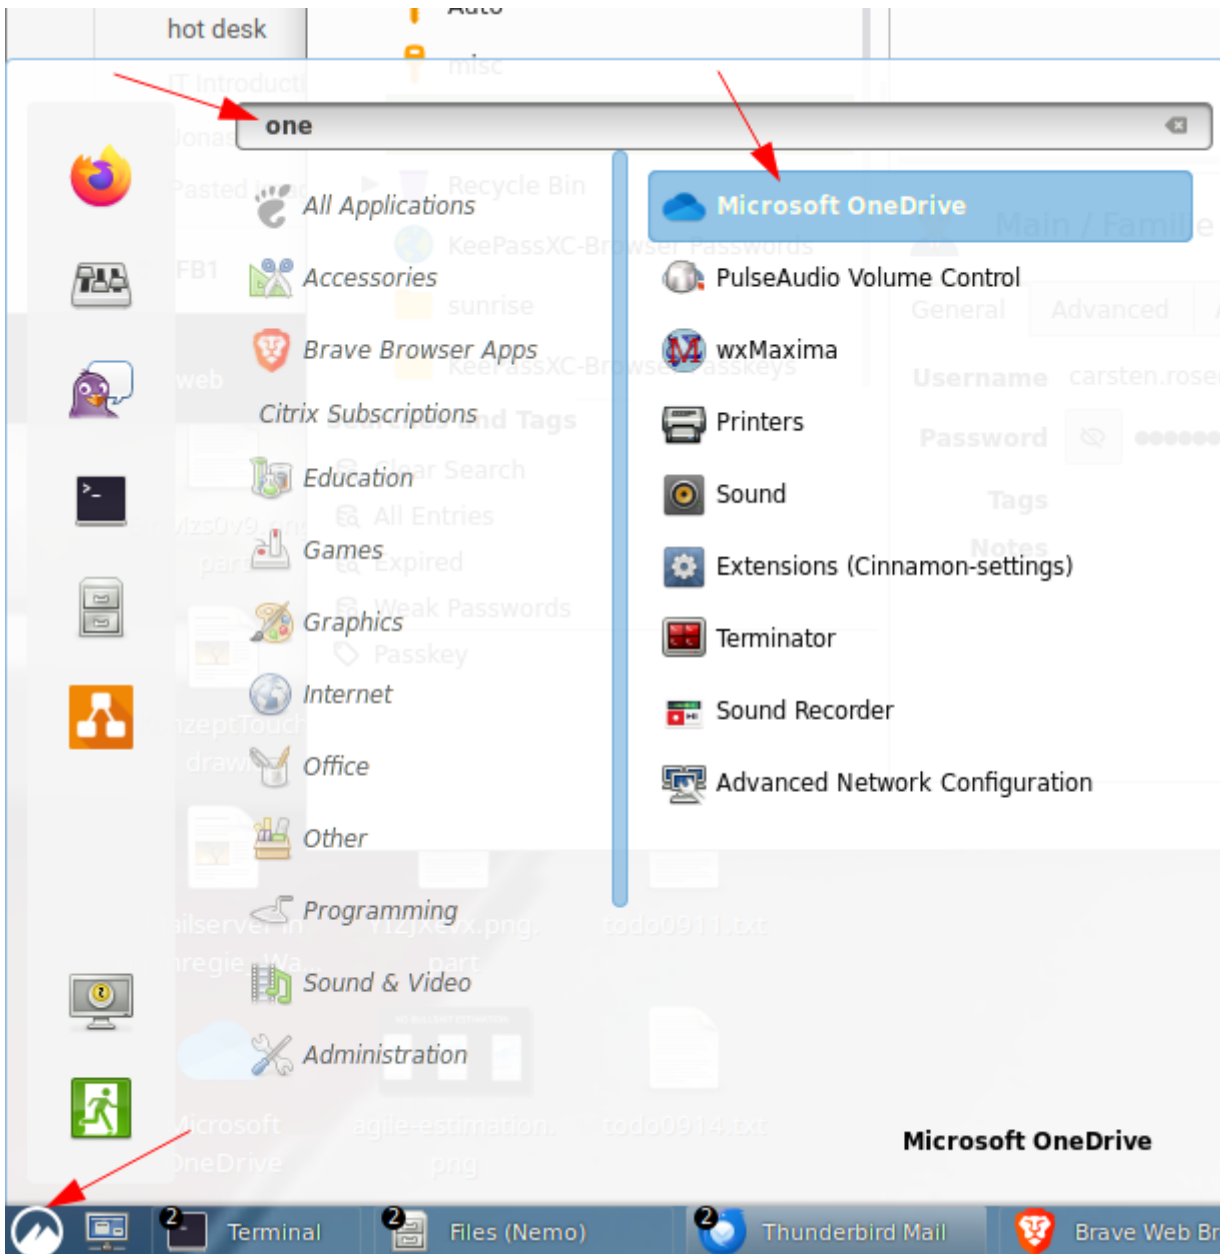

- No good solution for UZH users.
- In general, there are different variants to access !OneDrive from Linux.
- Unfortunately: UZH policy blocks apps (used with UZH Microsoft account), which are not privileged (security reasons) - the only allowed app is Microsoft !OneDrive App (only for Windows/Mac).
- It is possible to install a Web-App, which behaves a little bit like a lokal app, but the files are still remote.

OneDrive WebApp

- Open <https://uzh-my.sharepoint.com/> and log in - best in Chrome or Brave.
- Click on the install icon (upper right corner)

- From now on, you can start !OneDrive via the Menu > Type: !Onedrive > click

- But this is only a webinterface, not local storage, see drive.math.uzh.ch for a file sharing solution including local storage.
