

screenshot

- Standard tool: [flameshot](#), i.e. screenshot with graphical editor; Applications > Graphics > Flameshot
- (mate-screenshot) Applications > Accessoires > Take Screenshot

When you press Print-Screen (key: 'prt scn' or 'print' or 'druck') the screen will get a dark overlay and you can select the area you want to screenshot and immediately start editing the image.

Features:

- Adjustable selection
- Copy to clipboard or save to disk
- Highlight or blur parts of the screenshot
- Place markings such as arrows, circles and rectangles on the image
- Optional direct upload (no account needed) to <http://imgur.com> to share the screenshot online

[Debian](#) is a [free](#) operating system (OS) for your computer. An operating system is the set of basic programs and utilities that make your computer run.

Debian provides more than a pure OS: it comes with over 43000 [packages](#) precompiled software bundled up in a nice format for easy

command line

For more advanced user, 'scrot' is a command line tool that takes screenshot of either fullscreen, current window or selection area. You can bind this command to the printscreen key if you visit

[System > Hardware > Keyboard Shortcut](#) and scroll down to the custom keybinds. There you will see

the Printscreen function and can edit it to execute one of those:

```
# Create a screenshot of the entire screen in your home directory with a datetime stamp
scrot ~/y%m%d_%H%M.png

# Create a screenshot of the current window in your home directory
scrot -ub ~/y%m%d_%H%M.png

# Opens a selection tool to select the area to screenshot
scrot -s ~/y%m%d_%H%M.png
```

For advanced info on scrot type `man scrot` in a terminal.

Workflow to put images to the Wiki

- Activate the window to take screenshot of (left mouse click inside window).
- Press `Alt + Print Screen`
- Save it.
 - Default destination is your 'Desktop'. If you already have a file called 'Screenshot.png' there, a number will be appended to the filename.
- Wiki:
 - Log into the wiki homepage.
 - Select the desired page (**view**, not edit!!!).
 - Click on `Attach File` (bottom of the page).
 - In `File to upload` select the file and press `Upload`.
 - Copy the command `screenshot.png` to the clipboard.
 - Edit the page: choose **Text mode** not 'GUI Mode'!
 - Insert the command `screenshot.png`. Replace with `{{` and with `}}`
 - Save the work.
